

AIM / AI Impact and Momentum

An integrated system for AI readiness, implementation, measurement and maturity.

The Real Problem: AI Ambition Rarely Becomes Enterprise Impact

AI initiatives run into avoidable cost, coordination and execution problems when readiness, delivery, security and measurement are addressed separately.

What Goes Wrong

- **No Path to Scale:** Disconnected roadmaps, KPIs and readiness.
- **Cost Overruns:** Hidden integration and data costs.
- **Late Security Pushback:** CISO objections surface after key decisions.
- **Readiness Gaps:** Organisational barriers emerge during implementation.
- **Fragmented Measurement:** Activity tracked, business impact unproven.

Result

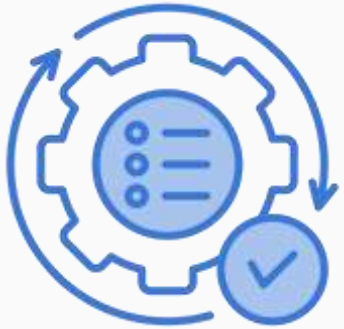

- Budgets grow, impact stalls.
- AI stays tactical, never transformative.

The underlying problem is not any one of these constraints, but the absence of an integrated approach that anticipates and manages them together.

Public Release | CC BY 4.0

AI Capabilities Must Work as One System

Readiness, implementation, measurement and maturity are interdependent, not standalone activities.

READINESS

Identify constraints before committing resources..

ROADMAPS

Sequence initiatives around dependencies and organisational capacity..

KPIs

Connect execution to business outcomes, not just activity.

MATURITY

Establish the capabilities required to sustain and scale results.

AIM connects all four, creating a coherent system for moving from AI ambition to sustained enterprise impact.

AIM: An Integrated System for AI Impact and Momentum

Connects readiness, implementation, measurement and maturity in one coherent system.

Build Long-Term Capability
Defines how organisations progress from ad hoc to optimised capabilities.

Align measurement to Enterprise Goals
Defines what to measure across technical, operational, business, user, and strategic dimensions; links KPIs to OKRs.

Readiness Before Investment
Evaluates what's ready, what's not, and what must come first.

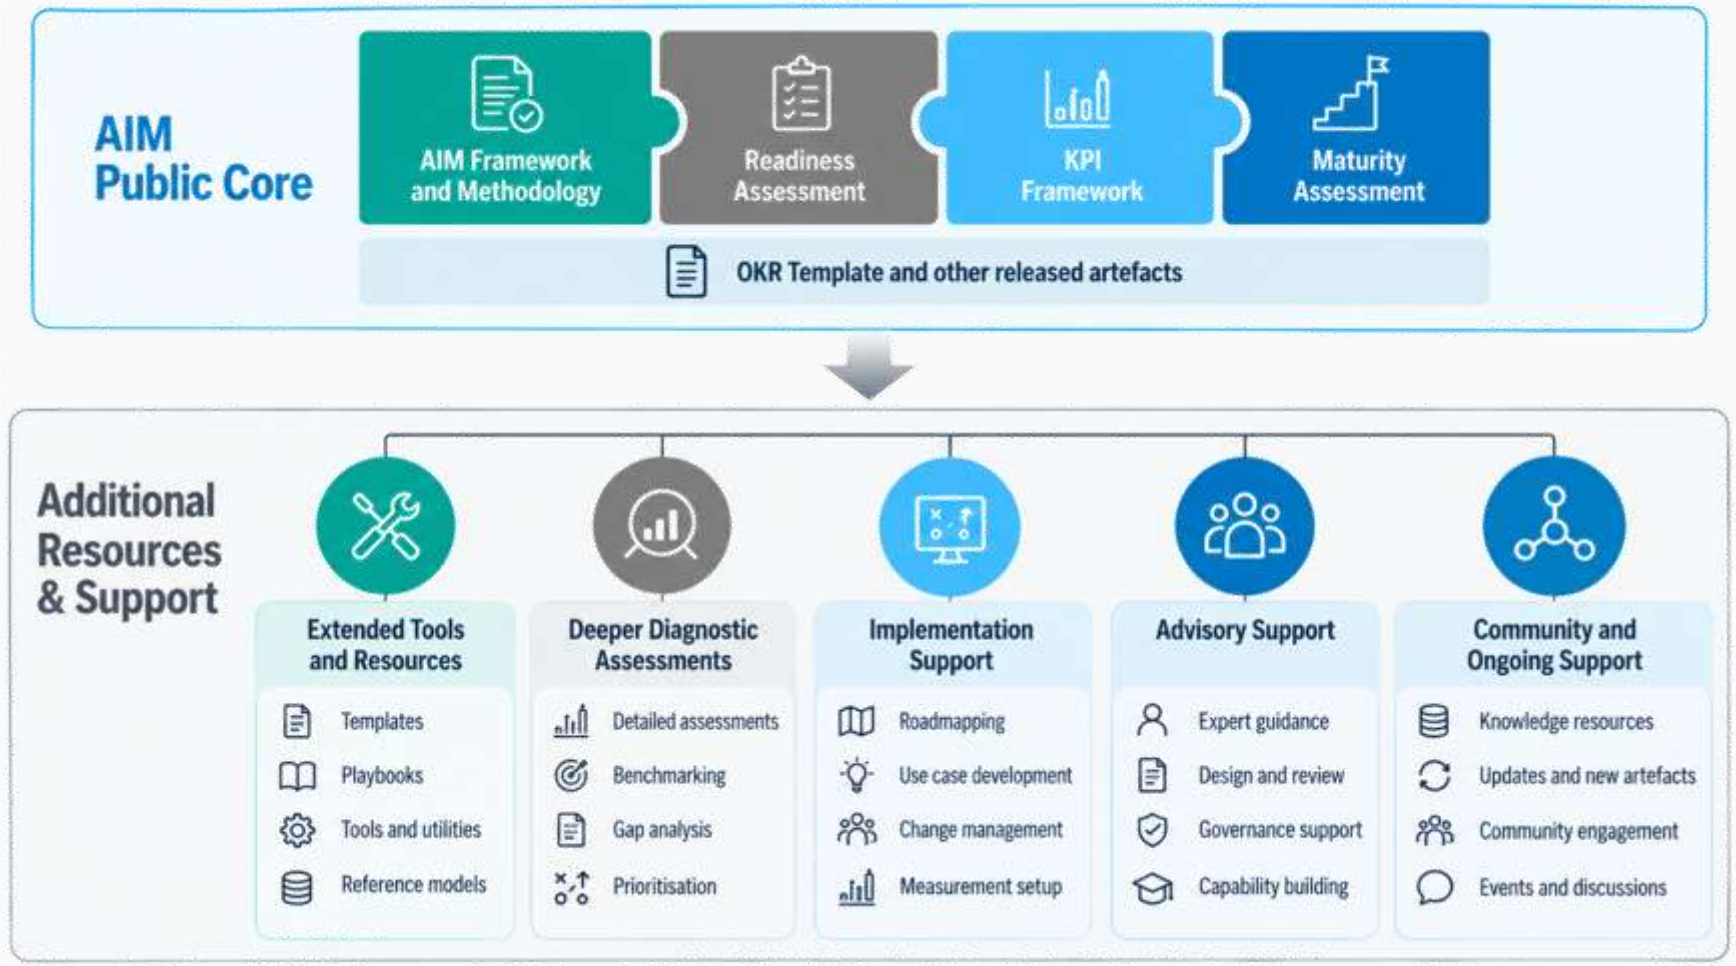

Execute in a Structured Way
Defines the phased journey of execution across strategy, data, governance, risk, change, use cases, and measurement.

AIM (AI Impact and Momentum): Four connected components. One integrated system for translating AI ambition into measurable enterprise impact.
